

DURACEM QUICKSET PLASTICIZING ACCELERATOR

快干药水

DURACEM QUICKSET is a water reducing, plasticizing and set accelerator cement admixture specially designed for acceleration of the setting time and considerably increases early strength of concrete. **DURACEM QUICKSET** helps to improve workability of the mix and reduced the water cement ratio, thereby minimizes drying shrinkage and reduces consequential cracking, increase the compressive and tensile strengths of concrete.

ADVANTAGES

- ▲ Speeds up initial setting time
- ▲ Increase compressive & tensile strength
- ▲ Improves workability & plasticity of the mix
- ▲ Reduces water cement ratio
- ▲ Better quality concrete, saves time & labour costs

DIRECTIONS FOR USE

Mix the required amount of **DURACEM QUICKSET** at a rate of 500ml per 50kg of Portland cement to the gauging water prior to its addition to the cement mix.
